                                                                                                                                                                                                                                                                                                                   This sequence encodes a human obesity protein binding protein-2 homologue (hoB-BP2h) of the invention. The hoB-BP2h nucleic acids and polypeptides may be used for the manufacture of a medicament for the treatment of obesity and/or obesity-related disorders. The hoB-BP2h nucleic acids are useful as probes or amplification primers in the detection, quantification or isolation of gene sequences or treascripts, for recombinant expression of hoB-BP2h polypeptides, as immunogens in the preparation and screening of antibodies, and in sense or antisense suppression of one or more hoB-BP2h genes or nucleic acids, host cell or tissue in vivo or in vitro. Antigenic epitope-bearing peptides and polypeptides are useful for raising or screening antibodies that specifically binds to the hoB-BP2h polypeptides.

                                                                               CC related lectin) protein (I). Pharmaceutical compositions comprising (I) CC are useful for treating immune system diseases such as asthma, leukaemia CC or other allergic or inflammatory diseases. Extracellular domains of (I) CC represent potential markers for screening, diagnosis, prognosis, CC follow-up assays, and imaging methods. (I) is useful as a target for CC drugs which inhibit inflammation, tissue damage and remodeling in CC asthma, and inflammatory diseases such as allergic rhinitis, CC osteoarthritis, Crohn's disease, psoriasis, rhemmatoid arthritis, CC onjunctivitis, etc. (I) is also useful for monitoring the course of CC disease or disorders, and for identifying agents that bind with and/or CC modulate the biological activity of SIGLEC-BMS proteins. The nucleic acid CC molecules (II) encoding (I) are useful in diagnosis and/or prognosis CC nucleotide sequences and/or SIGLEC-BMS proteins in a biological sample. (I) are useful as nucleic acid probes are useful for screening genomic Clibrary to isolate a genomic clone of SIGLEC-BMS gene copy number is determined for detecting diseases or disorders associated with SIGLEC-BMS transcripts or proteins. The SIGLEC-BMS antibodies are also cused to detect, sort or isolate cells expressing SIGLEC-BMS proteins and in diagnostic imaging technology. ABK43360-ABK43411 represent transcripts or collate cells expressing SIGLEC-BMS proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel isolated SIGLEC (sialic acid-binding Ig-related lectin) protein molecules useful for treating immune system diseases such as asthma, leukaemia, allergic rhinitis, psoriasis, conjunctivitis, Crohn's dise
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; sialic acid-binding Ig-related lectin; SIGLEC; asthma; immune system disease; leukaemia; allergy; inflammatory disease; tissue damage; allergic rhinitis; osteoarthritis; Crohn's disease; psoriasis; rheumatoid arthritis; conjunctivitis; gene; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Siglec-BMS-L3-995-2.
```

or other allergic or inflammatory diseases. Extracellular domains of (I) CC represent potential markers for screening, diagnosis, prognosis, CC follow-up assays, and imaging methods. (I) is useful as a target for CC drugs which inhibit inflammation, tissue damage and remodeling in CC asthma; and inflammatory diseases such as allergic rhinitis, Crohn's disease such as allergic rhinitis, CC osteoarthritis, etc. (I) is also useful for monitoring the course of CC disease or disorders, and for identifying agents that bind with and/or CC modellate the biological activity of SIGLEC-BMS proteins. The nucleic acid CC molecules (II) encoding (I) are useful in diagnosis and/or prognosis CC mucleotide sequences and/or SIGLEC-BMS proteins in a biological sample. CC (II) are useful as nucleic acid probes are useful for screening genomic CC library to isolate a genomic clone of SIGLEC gene. SIGLEC-BMS gene copy comber is determined for detecting diseases or disorders associated with CS IGLEC-BMS transcripts or proteins. The SIGLEC-BMS antibodies are also used to detect, sort or isolate cells expressing SIGLEC-BMS proteins and in diagnostic imaging technology. ABK43360-ABK43411 represent The invention relates to an isolated SIGLEC (stalic acid-binding Igrelated lectin) protein (I). Pharmaceutical compositions comprising (I) are useful for treating immune system diseases such as asthma, leukaemia or other allergic or inflammatory diseases. Extracellular domains of (I) acid

The nucleotide sequences are useful as sources of probes, primers, for chromosome mapping, and for generation of antisense sequences. They can also be used to create transgenic animals. The proteins can be used to treat a variety of diseases and disorders, depending on their function. Diseases that may be treated include blood coagulation disorders, cancers and cellular adhesion disorders. They may also be used to raise antibodies, AA23891 to AA234338, and AAY41685 to AAY41774 represent polynucleotide and polypeptide sequence given in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WPI;

The PRO polynucleotides and polypeptides have cytostatic activity. The polynucleotides and polypeptides can be used for detecting the presence of PRO polypeptides in samples, for linking bioactive molecules to cells and for modulating biological activities of cells, using the polypeptides for specific tells. The polypeptide targeting can be used to kill the target cells, e.g. for the treatment of cancers. The polypeptide pairs provide specific targeting of bioactive molecules to cells. AAC78600 to AAC78987 represent PCR primers and probes used in

                                                                                                                                                                                                                     ş
                                                                                                                                                                                                                                                                                                                                                Sequences AAS45925-AAS46231 represent DNA molecules encoding and PCR CC primers for PRO polypeptides of the invention. The sequences of the CC invention can be used to detect the presence of a tumour in a mammal by CC comparing the level of expression of a PRO polypeptide in a test sample CC of cells from the animal and a control sample of normal cells, whereby a higher level of expression in the test sample indicates the presence of a CC tumour in the mammal. Mammals include dogs, cats, cattle, horses, sheep, CC pigs, goats and rabbits but are preferably human. The polypeptides can be used to stimulate tumour necrosis factor (TMF) alpha release from human CC stimulate the proliferation or differentiation of chondrocyte cells. The CC proteins can be used to determine the presence of tumours and also cusceptibility to tumour development, particularly adrenal, lung, colon, can be used for genetic analysis of individuals with genetic disorders.
                                                                                                                                                                                                                                              US-09-937-636-3 (1-512)

New secreted and transmembrane PRO polypeptides and nucleic acids, useful in gene therapy, in chromosome and gene mapping, as chromosome markers, in tissue typing, and in chromosome identification -

Claim 2; Fig 117; 706pp; English.

CC transmembrane (PRO) polypeptides. Also disclosed is an antibody that CC specifically binds to the PRO polypeptide, a method for stimulating the CC contacting the blood a PRO polypeptide, a method for stimulating the CC contacting the blood a PRO polypeptide, a method for stimulating the CC contacting the blood a PRO polypeptide, a method for stimulating the CC cells with a PRO polypeptide, a method for detecting the presence of a CC tumour in a mammal and an oligonucleotide sequences are useful as probes, in chromosome and gene mapping, in generating antisense RNA and DNA, in preparing PRO polypeptides by recombinant techniques and in gene therapy CC (e.g. for replacement of defective gene). The PRO polypeptides are useful as molecular weight markers for protein electrophoresis purposes, for chromosome identification, as chromosome markers, as therapeutic agents, for stimulating the release of TNF-alpha from human blood, for Stimulating the presence of a tumour. The PRO polypeptides and uncleic cacids may also be used diagnostically for tissue typing. The sequences CC presented in ACA05700-ACA06004 are the CDNAs encoding the PRO invention discloses human nucleic acids encoding secreted g secreted and an antibody that

Novel secreted and transmembrane polypeptides and polynucleotides encoding them useful for treating cancer, kidney diseases, bone, cartilage disorders and immune deficiencies .

Claim 2; Fig 92; 459pp; English.

The present invention relates to the isolation of novel human PRO CC polypeptides, and the polynucleotide sequences encoding them. The CC PRO polypeptides are useful for detecting other PRO polypeptides, for CC linking bioactive molecules to cells expressing PRO polypeptides, for CC linking bioactive molecules to cells expressing PRO polypeptides, CC for modulating biological activities of cells expressing PRO polypeptides, CC polypeptides, and for for identifying agonists or antagonists. The CC bioactive molecule maybe a toxin, radiolabel or antiopody, and causes CC apoptosis or death of the cell. The PRO polypeptides are useful for CC treating immune disorders, diabetes or hyper or hyporinsulinaemia, CC bone and cartilage disorders or arthritis, tumours, and wound healing. CC the polypuclectide sequences encoding PRO polypeptides are useful as CC hybridisation probes, in chromosome and gene mapping, in the generation of antisense RNA and DNA, in the preparation of PRO polypeptides, for CC generating transgenic animals or knockout animals, for the genetic CC analysis of individuals with genetic disorders, and in gene therapy. CC The present sequence data for this patent was obtained in electronic CC format directly from the USPTO web site at CC sequence data for this patent was obtained in electronic CC sequence and the USPTO web site at
